

The TempObject action.

The TempObject action enables you to display a text or an image during a limited period of time, another text or image can be displayed before and after that period. This action is a great help when you add and remove time limited offers, holiday greetings etc...

The text/image can be inserted anywhere in a page, that makes it possible to simulate dynamic text.

Manual:

1. Add a body action object where you want the text/image to be inserted.
2. Highlight the body action.
3. Click the action button in the inspector and pick the TempObject action from the list.
4. Enter a start and stop date.
5. Enter the text you want to display before and after the period. (You can leave this field empty if you want.)
6. Enter the text you want to display during the period.
7. If you want to use an image instead of text check the "Change image" check box.
8. Use the brows button or the point and shoot feature to tell the action what image you want before and after the period.
9. Use the brows button or the point and shoot feature to tell the action what image you want during the period.

Enjoy!
